

XR4 & XM4 - Handle electrics replacement instructions

Before beginning make sure the battery is disconnected from the cart and the main power switch is OFF.

1. Gently pry up the front edge of the surface sticker with the control buttons on it to expose the screw. Remove the screw. Lift the control unit up out of the handle tube.
2. Disconnect the 2 wiring harness connectors. Remove the 2 screws holding the circuit board to the control unit.
3. Replace with the new circuit board and reconnect the 2 electrical connectors.
4. Replace the control unit in the handle tube and reinsert the screw. Stick the surface back down over the screw.
5. Test on the bench.
